

ILIAD 70

Launched Sydney Boat Show

The latest for Multihull Solutions, ILIAD 70, an epic power catamaran, was officially launched at the Sydney International Boat Show in August 2019.

Its bridge deck height of 1.25 metres at half load creates a dominant silhouette and excellent comfort in challenging conditions, while no compromises have been made to safety or performance. Broad, level walkways provide safe passage from the spacious aft cockpit to the foredeck area, and the ergonomic composite stairwell ensures easy transition from the cockpit to the breathtaking flybridge.

The ILIAD 70 delivers powerful performance, impressive range (in excess of 4,500nm) and complete comfort for legendary voyages or circumnavigations.

The design offers an internal helm station on the mezzanine level, in addition to the flybridge helm station, affording the skipper not only a bird's-eye ocean view but also the comfort of a day bed/lounge area, and easy access to all parts of the main deck systems and the galley for those long ocean passages.

The flybridge is truly impressive, seating 12 people in style in the luxurious lounge/dining area. Features its own full galley with full refrigeration, separate bar fridge, BBQ/grill, icemaker and much more, creating the ultimate entertaining zone with remarkable views.

The comprehensive galley features the best of the Siemens appliance range, ample storage, deep oversized stainless-steel double sink, Corian benchtops, full-size refrigerator and freezer, and incredible 360-degree sea views.

The ILIAD 70 interior can be fully customised to suit the unique preferences and needs of each client, with a range of layouts, designs and premium quality finishes.

In one of the many layout options available, the forward lounge area delivers the ambience of a luxurious waterfront apartment with views from every angle and seamless access to the saloon and dining areas.

The main deck can also accommodate a separate office or library area to inject a true essence of home to this legendary 70-footer.

A variety of layout options offer a master cabin on the main deck or a massive forward-facing lounge area with easy and safe access to her foredecks through a well-engineered access door.

All guest cabins are bright and airy with generous windows, and are luxuriously appointed with queen or king-size beds, oversized bathrooms and more storage for extended voyages than the ILIAD 70's 100+ft monohull competitors.

The owner's decadent cabin features a king-size bed, walk-in robe, lounge and more. The owner's hull design can also incorporate a laundry, workshop, office and even separate crew quarters with its own entrance from the bow.

The ILIAD 70 also has a large swim platform for safe and convenient sea access at anchor. A separate toilet and shower have been incorporated under the flybridge stairwell with direct access from the aft lower deck, which is ideal for use by swimmers after a long day in the sun.

The catamaran has been designed to facilitate maximum enjoyment at sea with three uniquely designed transom lockers (independent of engine rooms) to store surf boards, paddleboards, kiting gear, kayaks, dive tanks, fishing equipment and other leisure toys. One compartment also houses a substantial dive compressor (optional).

The catamaran's design allows for either traditional davits fitted to her transom for the tender, or for those wanting a larger tender carrying capacity,

a flybridge-mounted crane can lift and store the tender aft of the flybridge deck area.

The ILIAD 70's engine rooms are designed for easy access for servicing from the aft deck through watertight hatches and all major access points thoughtfully designed for convenience and safety.

The ILIAD 70 is one of few power catamarans in its size range that can be beached in case of emergency or for out-of-water servicing when navigating in remote areas.

Priced from USD\$2.85M, the ILIAD 70 presents a truly exciting option for power catamaran enthusiasts seeking a true custom built boat that delivers outstanding performance, range and value.
